

In The Abstract

A print order/delivery system and method, and a printing system, wherein a previously assigned unique identification data is stored on a user side of the system, and the user is registered such that the user is associated with the identification data. Pictorial data is transmitted to a print-order receiving side along with the identification data and order data, and then, on the print-order receiving side, a picture based on the supplied pictorial data is printed on the basis of the order data. The user is recognized from a group of registered users on the basis of the supplied identification data.
